

Assignment_File_Handling

Task 1

Read the text file and capture the password from file.

Ask user to input password.

If password is correct than open google chrome for user to access internet.

Else says permission denied.

Task 2

create 2 files:

1.username_file.txt : where user will create his username_file.txt and write username in this file.

2.userpassword_file.txt : Where user will create userpassword_file.txt and write his password in this file.

now user will login through the username and password:

you will read both files username_file.txt and userpassword_file.txt

you will check both the input correct entered by the user.

If both details are correct than you will open google.com for surfing

else print message permission denied as username or password is incorrect.
